

# Pacific Island Core Manual Files

## Web Files - How to Simply Open & Preview Them

1. Unzip the files
2. Open the index.html file in any browser (internet is not required)

## Web Files - How To Upload to Web Hosting

1. Upload & unzip folder to your hosting server to the folder destination of your choosing.
2. Link to the index.html webpage

NOTE, that when linking to an index file you don't need to add the index.html in the web address for convenience so for example. if you're linking to <http://domain.com/contents/index.html> you can actually just write [domain.com/contents/](http://domain.com/contents/) as a shorter cleaner version for users.

## LMS Files - For LMS Advanced User Tracking Data

LMS files were provided as well for convenience should they be requested later. Note that each zip folder is accompanied by a .png file that is a screenshot of the export settings for that LMS package. These are SCORM packages so you'll want to make sure that your LMS supports SCORM and the additional setting parameters noted in the .png files.
